

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

IN THE CLAIMS:

Please amend the claims as follows:

1. (Currently Amended) A collecting bag for human body wastes, comprising:

a bag member including at least two outer film blanks with joined edges defining the outer contours of the bag member, said outer contours defining a fluid-retaining area of said bag member;

an inlet opening provided in one of said film blanks[[,]];

a discharge portion at a distance from the inlet opening, in a lower portion of the bag member, including a closure device for bringing the bag from a discharge position, in which the bag is open, to a position of use, in which the bag is closed, the discharge portion defining a longitudinal direction,~~and;~~

an accommodating ~~means~~ element within the outer contours of the bag member for accommodating at least a part of the discharge portion in the position of use of the bag[[,]];

~~characterized in that~~

said bag member ~~includes~~ including at least a first substantially tubular inner film element and a second substantially tubular inner film element, each substantially tubular inner film

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

element being within said fluid-retaining area of said bag member and attached to the inner side of each outer film blank by means of at least one joint, said first and second substantially tubular inner film ~~element~~ elements being respectively situated on each at a respective side of a dividing line substantially parallel with the longitudinal direction defined by the discharge portion, each of said substantially tubular inner film elements ~~and~~ having, when the bag is substantially empty, a distal fold and a proximal fold with respect to said dividing line; ~~that~~

~~the~~ a first joint between the first substantially tubular inner film element and one outer film blank and a second joint between the second substantially tubular inner film element and said one outer film blank each respectively including ~~includes~~ at least one proximal joint section at or near the proximal fold and at least one distal joint section at or near the distal fold, for each of said first and second joints a first ~~the~~ distance (A) between at least a lower part of the proximal joint section and the proximal fold being smaller than ~~the~~ a second distance (C) between at least a lower part of the distal joint section and the distal fold[[,]]; ~~and that~~

said accommodating ~~means includes an~~ element providing at least one opening for receiving at least a part of the discharge

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

portion in the position of use of the bag, said opening extending substantially transversely between the proximal joint sections of the first and the second substantially tubular inner film ~~element~~ elements, respectively.

2. (Currently Amended) A The collecting bag as claimed in claim 1, wherein at least the proximal joint sections ~~section of the joint~~ between the first and second substantially tubular inner film ~~element~~ elements, respectively, and said one outer film blank ~~extends~~ extend obliquely with respect to said dividing line such that said proximal joint sections converge in the direction of the discharge portion.

3. (Currently Amended) A The collecting bag as claimed in claim 2, wherein the second distance ~~(C)~~ between the distal joint section and the distal fold is larger than the first distance ~~(A)~~ between the lower part of the proximal joint section and the proximal fold and smaller than ~~the~~ a third distance ~~(B)~~ between the upper part of the proximal joint section and the proximal fold.

4. (Currently Amended) A The collecting bag as claimed in claim 2, wherein ~~the~~ an angle of inclination between each oblique

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

joint section and the dividing line lies in the range from 5° to 60°.

5. (Currently Amended) A The collecting bag as claimed in claim 2, wherein ~~the~~ a distance between the lower ends of the oblique joint sections substantially corresponds to the cross-sectional dimensions of the corresponding part of the discharge portion.

6. (Currently Amended) A The collecting bag as claimed in claim 1, wherein ~~the~~ each proximal joint section is substantially parallel with ~~the~~ its respective proximal fold, such that the first distance ~~(A,B)~~ between the proximal joint section and the proximal fold is substantially uniform along a length of said proximal joint section, and wherein said first distance ~~(A,B)~~ is smaller than the second distance ~~(C)~~ between the distal joint section and the distal fold.

7. (Currently Amended) A The collecting bag as claimed in claim 6, wherein ~~the~~ a distance between the proximal joint sections substantially corresponds to the cross-sectional dimensions of the corresponding part of the discharge portion.

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

8. (Currently Amended) A The collecting bag as claimed in claim 1, wherein said accommodating element is a comfort layer overlying said one outer film blank, and wherein said at least one opening is provided by a slit in said comfort layer.

9. (Currently Amended) A The collecting bag as claimed in claim 8, wherein a reinforcing layer is inserted between said one outer film blank and said comfort layer, at least in the area of said slit.

10. (Currently Amended) A The collecting bag as claimed in claim 1, wherein each of said joint sections ~~at the ends of the sections~~ are reinforced by ~~means of spots containing reinforcing material, spot welding, a continuing~~ a reinforcing portion etc.

11. (Currently Amended) A The collecting bag as claimed in claim 1, wherein ~~further~~ additional substantially tubular inner film elements are provided in the bag member.

12. (Currently Amended) A The collecting bag as claimed in claim 1, wherein each substantially tubular inner film element is

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

provided in the area of the bag member situated near the discharge portion.

13. (Currently Amended) A The collecting bag as claimed in claim 1, wherein said bag member is substantially symmetrical with respect to said dividing line.

14. (New) A collecting bag for human body wastes, comprising:
a bag member including at least two outer film blanks with joined edges defining outer contours of the bag member and a fluid-retaining area within said bag member;

an inlet opening provided in one of said film blanks;

a discharge portion at a distance from the inlet opening, in a lower portion of the bag member, including a closure device for bringing the bag from a discharge position, in which the bag is open, to a position of use, in which the bag is closed, the discharge portion defining a longitudinal direction;

an accommodating element within the outer contours of the bag member for accommodating at least a part of the discharge portion in the position of use of the bag;

said bag member includes at least a first and a second substantially tubular inner film element, each substantially

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

tubular inner film element being enclosed within said bag member in said fluid-retaining area and being attached to the inner side of each outer film blank by a respective pair of spaced joint sections, said first and second substantially tubular inner film elements being respectively situated at a respective side of a dividing line that is substantially parallel with the longitudinal direction defined by the discharge portion and each substantially tubular inner film element being provided in the area of the bag member situated near the discharge portion;

said accommodating element including an element providing at least one opening for receiving at least a part of the discharge portion in the position of use of the bag, said opening extending substantially transversely between said respective pairs of joint sections of the first and the second substantially tubular inner film elements, respectively.

15. (New) The collecting bag as claimed in claim 14, wherein at least the joint sections of each pair of joints that are proximal to said dividing line extend obliquely with respect to said dividing line such that said proximal joint sections converge in the direction of the discharge portion.

Serial No.: 10/511,168
Atty. Docket No.: P70187US0

16. (New) The collecting bag as claimed in claim 15 wherein an angle of inclination between each oblique joint section and the dividing line lies in the range from 5° to 60°.

17. (New) The collecting bag as claimed in claim 16, wherein a distance between the proximal joint sections substantially corresponds to cross-sectional dimensions of a corresponding part of the discharge portion.

18. (New) The collecting bag as claimed in claim 14, wherein said accommodating element is a comfort layer overlying at least one outer film blank, said opening being provided by a slit in said comfort layer.

19. (New) The collecting bag as claimed in claim 18, wherein a reinforcing layer is inserted between said one outer film blank and said comfort layer, at least in the area of said slit.

20. (New) The collecting bag as claimed in claim 14, wherein said bag member is substantially symmetrical with respect to said dividing line.
